Project 1 - Data Analyzer

Theory answers

Q What is Data analysis

→ Data analysis is the process of collecting, cleaning and studying data to find useful information and patterns. It helps in making better decisions by understanding trends and behaviour

Q Describe How to ~~Pla~~ plan Data science project

→ A Data science project is planned in the following st

(i) problem understanding
(ii) Data collection
(iii) Data cleaning
(iv) EDA
(v) Feature engineering
(vi) Model Building
(vii) model evaluation
(viii) Deployment

Page.....

(3) Machine learning problem Statement

→ The objective of this problem is to predict whether a customer will churn based on their purchase behavior and other relevant feature

(4) What are Tensors?

→ Tensors are multi-dimensional array used to store data. They are extension of scalars, vectors and matrices.

Numpy ex:

- Scalar - Single value
- vector - 1D ([1, 2, 3])
- matrix - 2D ([[1, 2], [3, 4]])
- Tensor - 3D array
  ([[[1, 2], [3, 4]], [[5, 6], [7, 8]]])
